Multi-tenancy
If applicable: how organizations/workspaces are scoped and how data isolation works.

05 Third-Party Services

List every external service the app depends on.

Format
For each service:
- **Service**: What it does
- **SDK/Library**: Which package to use
- **Config**: Key environment variables and setup
- **Failure handling**: What happens when this service is down

Common Services
- **Payments**: Stripe, Lemon Squeezy, etc.
- **Email**: Resend, SendGrid, Postmark
- **File storage**: S3, Cloudflare R2, Uploadthing
- **AI/ML**: OpenAI, Anthropic, Replicate
- **Analytics**: PostHog, Mixpanel, Segment
- **Monitoring**: Sentry, LogRocket

06 Frontend Architecture

Tech Choices
- **Framework**: Next.js, Vite + React, SvelteKit, etc.
- **Component library**: shadcn/ui, Radix, Material UI, etc.
- **Styling**: Tailwind CSS, CSS Modules, styled-components
- **State management**: React Query, Zustand, Redux, etc.

Page Structure
List every page/route with its path and purpose:
- `/` — Landing or dashboard
- `/app` — Main application
- `/settings` — User/org settings

Data Fetching Strategy
- Server components vs. client components
- Caching and revalidation approach
- Global loading and error state handling

07 Infrastructure & Deployment

Hosting
- **Frontend**: Vercel, Netlify, Cloudflare Pages, etc.
- **Backend**: Same as frontend / Railway / Fly.io / AWS
- **Database**: Neon, Supabase, PlanetScale, RDS
